

## Forklift Drum Handler

The fork mounted drum positioner offers effective and safe movement of drums from horizontal to vertical and vice versa.

To pick up a drum in the vertical position:

- Lower the attachment to the ground so as to support the tines, then release the handle via the pull chord.
- Gently raise the forks until the tines are clear of the ground and are hanging vertically.
- Approach the drum and lower the tines over it.
- Reverse the truck slowly while gently lowering the forks until the drum comes to rest on the ground in the horizontal position.
- This movement will auto-lock the tines, the drum can now be transported.

Model Ref.	Weight	LLC	C of G
CFDP3T	95kgs	165mm	770mm
CFDP4T	106kgs	165mm	850mm

Forklift Drum Handlers offer a unique means of manipulating drums from horizontal to vertical and vice-versa without leaving the seat of a fork truck. Completely mechanical in operation, they can be used for loading & unloading vehicles, drum stands, racks and transporting drums. Suitable for use with Steel/ "L" Ring Plastic Drums of 210-litre capacity. Stainless Steel Model also available.
